Code setting guide for Dogtra 2600T&B / 2602T&B

GR/OR Toggle Switch

1. Start with the receiver/collar turned off and the transmitter turned on.
On the front of the transmitter there is a GR/OR toggle switch. Set this toggle switch on the “**OR**” position to synchronize the transmitter with the **ORANGE** collar/receiver. Set the toggle switch on the “**GR**” position to synchronize the transmitter with the **GREEN** collar/receiver.

Intensity Selection Dial

2. Select the intensity level **0** with the intensity selection dial on top of the transmitter.

3. Place the red dot on the back of the transmitter against the red dot on the Green or Orange collar/receiver. Hold the two red dots together for 5 seconds, until the green LED on the receiver/collar starts to blink rapidly, and then separate the two red dots.

NICK button and CONSTANT button
on the front side of the transmitter

4. Hold the Nick button and the Constant button on the front of the transmitter simultaneously down for 3 seconds or until the rapid green blink of the LED on the receiver/collar resumes a slower pace. The code setting work is now completed.
